

Green Claims Directive proposal

Cosmetics Europe recommendations ahead of Council General approach

Cosmetics Europe¹, the European trade association for the cosmetics and personal care industry, welcomes the European Commission's proposal for a Green Claims Directive and supports its overarching goal to tackle "greenwashing" and develop an EU-harmonised legislative framework on green claims. This would help creating a level playing field for businesses and truly empower consumers to make more sustainable choices.

Given the crucial role of claims in differentiating cosmetic products, stimulating innovation and fostering competition, and given Cosmetics Europe's longstanding engagement in this field, we would like to share our recommendations on how to reach further a workable framework which allows timely market access for improved products for which substantiated environmental claims are made.

Workable alternative to the ex-ante verification

The mandatory external ex-ante verification of environmental claims would lead to high administrative costs and a considerable administrative and bureaucratic burden, which would inhibit the spontaneity and speed, on which marketing lives to a large extent. This in turn will delay the offer of key information on more sustainable products and might lead to green hushing as fewer companies could find themselves in a position to communicate the more sustainable aspects of their products. Thus, it would be counterproductive for the goals of the Green Deal.

The claim-by-claim pre-approval process should be replaced by the obligation for companies to set-up **internal verification processes** to verify the substantiation and communication of environmental claims. Upon completion of such procedure, a company would draw up a substantiation dossier mutually recognized within the EU at the time of making the claim public. The substantiation dossier would be made available upon request in any audit procedures as part of **in-market controls** of national authorities of the Member State where the economic operator is established, to ensure correct application and enforcement.

Our alternative proposals for a wording of Article 10, which are based on external audits of the internal procedures of traders, are highlighted below with the following amendments presented in the annex, which in our view would be necessary to make the system workable.

Aggregated scoring and private labels

We support the principle that broad environmental impact information on products should be clear, transparent, science driven and comparable, hence based on a robust footprint methodology, and believe that such information can help consumers make more sustainable choices. Therefore, we welcome **the recognition of the usefulness of science driven private labels and aggregated scoring** if they provide added value to the consumers.

By adhering to shared and transparent principles, a scoring system would support consumers in making sustainable purchase decisions by enabling cosmetic product comparison and prioritisation of environmentally

friendly options. It would also incentivise companies to improve the sustainability of their products to upgrade their environmental scores, supporting sustainability efforts in across the industry.

We agree with the intention to ensure that environmental labelling systems should be robust, and science based to ensure consumers have access to transparent information as reflected by the wording of the Directive. Therefore, to ensure continuous legal certainty, we suggest that **an interim framework should be developed to allow the use of aggregated scoring systems that are based on a full life-cycle analysis until a dedicated “Union law” is adopted** and not only to be established in national legislation.

Potential ban for environmental claims for products containing hazardous substances.

We would like to remind authorities that, even if a substance would be hazardous, it could still be properly risk managed, controlled, and further used in consumer products without provoking adverse effects on human health or the environment. Consequently, this should not preclude the use of environmentally claims, provided they are properly justified and compliant with the GCD.

Many Natural Complex Substances (NCS) derived from plants or plant components–find extensive use in cosmetics, being well known in terms of safety and consumer benefits, despite their inclusion of substances with inherent hazardous properties. Implementing such a system could disincentive the use of this substances and then damage the EU agriculture, contradict the objectives of the Green Deal by preventing genuinely sustainable products from making environmental claims. **Therefore, we strongly oppose any potential ban for environmental claims for products containing hazardous substances, specifically on natural products.**

Annex - Cosmetics Europe proposals for amendments.

Article 2

Definitions

Commission proposal	Cosmetics Europe recommendation
<p>Article 2, point 2</p> <p>‘explicit environmental claim’ means an environmental claim <i>that is in textual form or contained in an environmental label</i>;</p>	<p>Article 2, point 2</p> <p>‘explicit environmental claim’ means an environmental claim <i>where the specification of the claim is provided in clear and prominent terms on the same medium or through digital means.</i></p> <p><i>For the avoidance of doubt, this excludes any messages or representations regarding product composition, ingredients, packaging, or other attributes of traders, products and services, provided such messages or representations primarily focus on aspects other than environmental impact.</i></p>

Article 7

Environmental labels

Commission proposal	Cosmetics Europe recommendation
<p>Article 7, paragraph 1</p> <p>Member States shall ensure that environmental labels fulfil the requirements set out in Articles 3 to 6 and are subject to verification in accordance with Article 10.</p>	<p>Article 7, paragraph 1</p> <p>Member States shall ensure that environmental labels fulfil the requirements set out in Articles 3 to 6 and are subject to verification in accordance with Article 10. <i>This paragraph shall apply to all environmental labels presenting a rating or score of a product or trader, including those run by economic and non-economic operators.</i></p>
<p>Article 7, paragraph 2</p> <p>Only environmental labels awarded under environmental labelling schemes established under Union law may present a rating or score of a product or trader based on an aggregated indicator of environmental impacts of a product or trader.</p>	<p>Article 7, paragraph 2</p> <p>Only environmental labels awarded under environmental labelling schemes established under Union law may present a rating or score of a product or trader based on an aggregated indicator of environmental impacts of a product or trader. <i>Until a dedicated Union law establishing such labelling scheme is adopted, environmental labels may present a rating or score if these rely on a full life cycle analysis-based methodology complying with the requirements of this Directive.</i></p>

<p>Recital 41</p> <p>The environmental labels often aim at providing consumers with an aggregated scoring presenting a cumulative environmental impact of products or traders to allow for direct comparisons between products or traders. Such aggregated scoring however presents risks of misleading consumers as the aggregated indicator may dilute negative environmental impacts of certain aspects of the product with more positive environmental impacts of other aspects of the product. In addition, when developed by different operators, such labels usually differ in terms of specific methodology underlying the aggregated score such as the environmental impacts considered or the weighting attributed to these environmental impacts. This may result in the same product receiving different score or rating depending on the scheme. This concern arises in relation to schemes established in the Union and in third countries. This is contributing to the fragmentation of the internal market, risks putting smaller companies at a disadvantage, and is likely to further mislead consumers and undermine their trust in environmental labels. In order to avoid this risk and ensure better armonizedon within the single market, the explicit environmental claims, including environmental labels, based on an aggregated score representing a cumulative environmental impact of products or traders should not be deemed to be sufficiently substantiated, unless those aggregated scores stem from Union rules, including the delegated acts that the Commission is empowered to adopt under this Directive, resulting in Union-wide armonized schemes for all products or per specific product group based on a single methodology to ensure coherence and comparability.</p>	<p>Recital 41</p> <p>The environmental labels often aim at providing consumers with an aggregated scoring presenting a cumulative environmental impact of products or traders to allow for direct comparisons between products or traders.
