Deutscher Bundestag  
Platz der Republik 1  
11011 Berlin

02 September 2024

Dear [REDACTED]

Emergent is a global biosciences company dedicated to protecting and enhancing life by providing specialized medical products that address accidental, intentional, and naturally occurring threats to public health. We develop, manufacture, and deliver medical countermeasures against public health threats through a pipeline of innovative vaccines and therapeutics worldwide. For 25 years, Emergent has collaborated with US and international governments to support their preparedness strategies against biological threats, as well as emerging infectious diseases.

[REDACTED]  
[REDACTED] We are eager to learn how biological and other health threats are integrated into the federal government's planning and implementation in Germany, especially in relation to the defense sector.

Given your expertise in health care and protection in the FDP parliamentary group, we would like to arrange an exchange focusing on countering current and future threats in relation to defense, health, the Health Security Act and the stockpiling pipeline in Germany. Future threats will become increasingly unforeseen and unexpected – a circumstance already mirrored by the threat Russia is posing to Germany and its allies. Therefore, strategic and long-term planning for preparedness, especially for low-probability and high-impact threats like biological attacks and their countermeasures, is highly essential.

We are keen to hear your perspective on civil protection and disaster control. To this [REDACTED]  
[REDACTED]  
[REDACTED]

We would gladly reach out to your office to discuss the details and arrange a suitable meeting time. We are flexible with regards to times and would be happy to coordinate with your office to arrange a suitable time for you.

We look forward to your response and are available to answer any questions or provide further information.

Sincerely,

[REDACTED]
