ODA Grants for Health, unspecified (estimate)	5,637.63	5,747.04	5,312.86	6,107.98	6,324.50	5,745.51	8,130.84	10,302.42
ODA Grants for Health, specified by country	15,637.99	15,181.34	15,635.37	16,716.19	15,716.04	15,223.50	19,362.83	20,800.84
Domestic Gen. Gov. Expenditure for Health	704,975.5	715,087.3	707,093.5	770,470.0	830,116.8	846,665.4	885,248.6	1,001,882.0
Total Expenditure from Public Sources	726,251.1	736,015.7	728,041.7	793,294.2	852,157.3	867,634.4	912,742.3	1,032,985.3
General government revenue	6,958,914	6,706,670	6,685,269	7,337,483	7,809,099	7,801,481	7,012,761	8,578,936
Gross domestic product	26,681,610	25,846,975	25,968,774	28,262,726	29,984,406	30,683,251	29,823,771	34,898,484
Population (millions)	5,920.47	6,001.54	6,081.16	6,160.26	6,237.12	6,311.23	6,382.99	6,449.39

Data sources and methodological notes

The charts and tables presented in this publication aim to offer an easily accessible overview of the reality of public financing in support of health for all developing countries that were eligible as recipients of Official Development Assistance (ODA) in at least one year of the study period 2014-2021 according to the standards of the OECD Development Assistance Committee (DAC). Of these 146 countries Chile, Seychelles and Uruguay graduated from the DAC list of ODA recipients as from 1 January 2018 and Cook Islands was removed from the list on 1 January 2020. The DAC definition coincides with the World Bank definition of low- and middle-income countries, except that it excludes member countries of the G8 or the EU (including those with a date of admission to the EU). In particular, the document shall contribute to apprehend the importance of ODA as an indispensable element for reaching universal health coverage and, ultimately, achieving the human right to health in lower income countries. In addition to the direct financial flows from international cooperation and domestic sources, the statistics include the main factors that determine the respective economic potentials and limitations to raise the required resources through internal efforts.

In the following you find a brief description of the data sources, analytical processes and methodological procedures applied to determine the shown indicators:

The figures on **ODA grants for health** are based on our own analysis, which does not simply rely on official reporting, but encompasses a critical review on the project level. Intending to estimate as precisely as possible the ODA contributions in support of health benefitting individual countries, our approach seeks to consider all relevant aid activities for identifying and quantifying exactly those flows which specifically foster Sustainable Development Goal (SDG) 3 and its targets. The research combines two fundamental stages: First, a comprehensive keyword search applied to the totality of projects or components reported by DAC/OECD member countries and health relevant multilateral organizations to the Creditor Reporting System intends to detect every flow that may contribute to SDG 3. Second, the reported information such as project titles, descriptions, purpose codes and implementing channels is scrutinized to determine which activities are in fact supporting specific programmatic areas of SDG 3 and to estimate the respective fractions of the involved annual disbursements. In addition, all financial amounts exceeding 5 million US\$ in at least one of the study years are reviewed regardless of the descriptive identifiers. Thanks to the fact that reporting to the CRS database is mandatory for DAC members and this information system is also widely used by most of the important multilateral organizations it covers close to 100 percent of funding streams that meet ODA criteria. The analysis includes the totality of projects funded by the 23 DAC members that joined the organization until 2010, which account for 91% of the real ODA transfers in the form of grants provided by all official donor countries (2021). We focus on ODA grants considering that these contributions - unlike loans and other lending instruments – represent in general budgetary resources from public institutions, are not coming with debt risks and can be allocated according to the priority needs of developing nations and underserved populations. As the main result of several consecutive research phases, we developed a list of projects with more than 500.000 data entries representing the annual disbursements for projects or components thereof that were found relevant for health financing. Of these, roughly 385.000 entries were classified as financial flows that specifically support interventions in the area of health or tackling particular health problems. In consequence, the ODA grants displayed in the document represent the sum of the disbursements made for the identified activities that foster any of the health specific targets.

In the period under review, over 72 percent of ODA grants for health were specified by recipient countries. The remaining funding streams were defined by regions (6 percent) or as global flows (21 percent). To consider this sizable part of development cooperation in support of health we allocated the respective amounts to the recipient countries applying the assumption that these resource transfers follow the same geospatial distribution patterns as the grants going to specific recipient nations. This represents the most suitable approximation to the reality considering that these contributions are to a considerable extent going to public institutions of the respective donor governments (22 percent) or are transferred as earmarked contributions to the UN system (nearly 25 percent), non-governmental organisations (19 percent) as well as other actors in development cooperation and, therefore, reflect

to a significant degree the policy aims of the respective donor nations. The calculation of the imputed country shares of global and regional grants is conducted for each year and the resulting amounts are presented separately from the country specific grants in the graphs and tables.

The figures for **domestic general government expenditure for health** are calculated with data from the WHO Global Health Expenditure Database (Update of December 2023). They represent the sum of three revenue sources, namely transfers from government domestic revenue that are allocated to health purposes, social insurance contributions and capital health expenditure funded through domestic public sources. Taking account of inconsistencies in reporting of the latter component the respective numbers in the graphs referring to amounts per capita are highlighted in yellow or red colour in those cases, where the annual shares of capital expenditure in total domestic public health financing exceed 5 or 10 percent respectively. In these cases, the interpretation of trends over the years requires special caution considering that the variations of mobilized domestic resources may be strongly influenced by fluctuating investments in the health infrastructure or differing availability of data regarding this item.

The calculation of the **general government revenue from domestic sources** uses the data provided through the IMF World Economic Outlook (WEO) database, April 2024, on general government revenue as percentage of GDP (gross domestic product). As this indicator includes grants receivable besides taxes, social contributions and other internal revenue it is necessary to deduct the amount of external funding. Considering that for lower income countries ODA grants represent by far the most important source of international contributions the project data of the CRS database are utilised to calculate the transfers received by central and local levels as well as public entities of the recipient governments. Therefore, the shown data on domestic government revenue represent the figures on total government revenue minus the ODA grants going to the public sector of recipient countries. Again, regional and global flows are redistributed according to the shares of the totality of country specific grants.

In general, the data on **gross domestic product, current prices**, are extracted from the WEO database. An additional search for total amounts or values per capita was done for other developing countries with mostly small population sizes using sources such as UN data, the World Development Indicators (WDI) of the World Bank or the Global Health Expenditure Database (GHED). In these cases, the alternative data sources are indicated in the respective charts.

Data on **population by country and year** are taken from the World Population Prospects 2022 - Special Aggregates, Online Edition, provided by the UN Department of Economic and Social Affairs, Population Division (2022). The presented indicator values refer to the estimates as of 1 July of the respective years.

Due to data gaps the following countries were excluded from the calculation of mean values by income groups or regions: Cook Islands, Cuba, Democratic People's Republic of Korea, Kosovo, Libya, Montserrat, Niue, Saint Helena, Somalia, Syrian Arab Republic, Tokelau, Wallis and Futuna, West Bank and Gaza Strip, Western Sahara.
